Homework: Postman

Your Homework is related to the "Task Board" System, which you already familiar with. You can find the endpoints and the information needed to complete the homework in the **09.Exercise-Web-API-and-Postman.docx document, under exercise 4. The "Task Board" System**

1. Create Task

Using Postman, create a new task with the attributes needed in the Task Board system. Paste the response body in the box below (not a picture of the response body, but the actual JSON object).

Example (Replace the example with the response body that you will receive, when executing the request):

```
{
   "msg": "Task added.",
   "task": {
      "id": 7,
      "title": "New Task Created in Postman",
      "description": "This is some description.",
      "board": {
         "id": 1001,
         "name": "Open"
      },
      "dateCreated": "2025-08-04T14:00:48.330Z",
      "dateModified": "2025-08-04T14:00:48.330Z"
   }
}
```

2. Edit Task

Using Postman, edit the title of the task you've just created. Paste the response body in the box below (not a picture of the response body, but the actual JSON object).

```
{
   "msg": "Task edited.",
   "task": {
      "id": 7,
      "title": "Changed title through Postman",
      "description": "This is some description.",
      "board": {
         "id": 1001,
         "name": "Open"
      },
      "dateCreated": "2025-08-04T14:00:48.330Z",
      "dateModified": "2025-08-04T14:02:20.828Z"
   }
}
```

3. Delete Task

Using Postman, delete the task you've just edited. Paste the response body in the box below (not a picture of the response body, but the actual JSON object).

```
{
    "msg": "Task deleted: 7"
}
```
